Description	A fastener manufactured from spring steel that is permanently bent in the shape of a “U”. The spring action of the steel permanently holds the two sides of the “U” at a constant distance from each other. Barbs are formed on each of the four edges, above the 90° corners. The barbs are bent inward to add to the clip’s holding power when the part is set in place.
Applications / Advantages	Designed to clamp panels together or apply spring-loaded tension on delicate surfaces. They offer the convenience of not requiring screws or welds while being inexpensive.
Material	SAE 1050 or higher carbon spring steel
Hardness	Rockwell C 40 - 50
Plating	Parts are commonly supplied in zinc or black phosphate finish.
