<b>Description</b>	Hex nut with a circular base flaring out from the bottom of the nut that is 6% to 25% wider than the flange of a standard serrated flange nut. The bearing surface of the flange has serrations which displace material on the mating surface when the nut is wrenched into place, forming a connection that resists loosening.
<b>Applications/ Advantages</b>	Offers the same advantages of the standard serrated flange lock nut, including reusability, but will span even larger holes. Also has a more uniform bearing-stress to clamp-force ratio than the standard serrated flange nut.
<b>Material</b>	Low carbon steel
<b>Hardness</b>	Rockwell C40 minimum
<b>Plating</b>	See Appendix-A for plating information
